Span 500

ACCESS TOWER SYSTEM

Span 500 is a highly adaptable, fastrack tower system featuring 500mm rung spacing and integral ladder frames, aimed primarily at the rental market. This Instant tower can be constructed with platform heights in 0.5m increments and does not need separate guardrails, giving greater flexibility and fewer components in your inventory.

All Instant towers feature the unique high strength Rib-Grip jointing system. This mechanical joint system has been proven for over 60 years, is stronger and more durable than a welded joint and carries our no quibble 10 year joint guarantee. In addition, all other parts carry an extended 3 year warranty as standard – just what the professional needs to ensure peace of mind.

Span 500 Towers are available in both narrow (0.82m) and wide (1.43m) versions, with lengths of 2m, 2.5m and 3m. Main tower components (platforms, toeboards, horizontal braces and outriggers) are fully compatible with other Instant towers to provide maximum flexibility and minimum inventory. The Z-configuration bracing pattern enables quick, hassle free assembly whilst providing a very rigid structure.

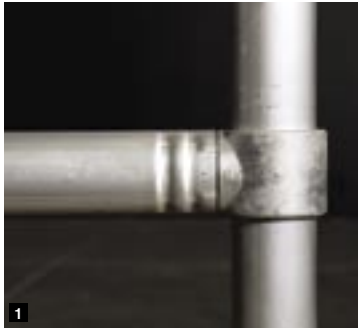

Span 500 Towers are compliant with EN1004 and can be assembled in compliance with Work at Height Directives.

Key Features

1. Rib-Grip – cold formed joints

The cold-formed Rib-Grip jointing process is a key feature of the Instant tower system and provides three times the strength and durability of traditional welded joints. 10 year no question warranty!

2. Span 500 Frame – reversible multi-purpose frames

High-strength lightweight aluminium alloy construction makes components easier to handle.

3. Adjustable Leg

A choice of 400mm, 600mm & 800mm height adjustment is provided by Quick-Adjust legs. This provides quick and easy levelling on rough or uneven surfaces. Once loaded they cannot be accidentally released.

4. Automatic locking Brace Hooks & Heavy 'Rhino-nose'

Hooks snap into locked position without prior 'priming' and an easy-release catch design aids disassembly. The large contact area (over 225") gives a firm grip. The Rhino-nose is very durable for arduous site conditions resisting damage if dropped.

5. Fluted ladder rungs

Provides better grip and increased slip resistance when climbing ladders during assembly or once erected.

6. TX2000 Platform

The TX2000 lightweight platform is available in standard and trapdoor formats. It provides all-round edge protection. All components can be easily replaced should damage occur.

New Snappy Ladder

This Snappy Ladder takes seconds to assemble, is easy to transport in a small van, and offers a perfect solution to low level access challenges.

A wide range of components and accessories are available for the Span Access Tower Systems providing maximum versatility.

Walk-thru frame

High Clearance Platform

Spandek Walkway

Ballast Weight

Nylon Coupler

Base Plate

Painted Tower

A painted finish can be applied to any product in the INSTANT range. This offers a permanent solution for 'tower' identity on the work site.

Key advantages: strengthens corporate identity, differentiates inventory from competitors, suffer fewer losses than non-branded towers.
